Name _____

Ada Lovelace: The First Computer Programmer

Short Answer Key

1. Her mother encouraged her to study mathematics and science.
2. She added notes explaining how the machine could be programmed to solve complex problems.
3. She showed that computers could do more than just math—they could help with art, music, and other tasks.
4. She faced challenges because people did not believe women could be scientists. She also had health problems.
5. It is a day to celebrate Ada Lovelace's contributions and encourage more girls to explore science and technology.
