Name _____

Tim Berners-Lee: The Man Who Created the World Wide Web

Imagine a world where you cannot search for information online, send emails, or watch videos on your favorite websites. That was what life was like before Tim Berners-Lee invented the World Wide Web. Thanks to his work, people all over the world can now connect, learn, and share information easily.

Early Life and Education

Tim Berners-Lee was born on June 8, 1955, in London, England. His parents were both mathematicians and computer scientists, and they helped build some of the first computers. Growing up, Tim was fascinated by how computers worked. He loved building things and even made a homemade computer using a television set! Tim studied physics at Oxford University, where he learned more about computers and technology. After graduating, he worked for different technology companies, where he became interested in how computers could share information.

The Invention of the World Wide Web

In the 1980s, Tim worked at a research center called CERN in Switzerland. Scientists from all over the world worked there, but they had a problem: sharing information was difficult. Tim came up with a brilliant idea—a system where computers could connect to each other using a special language. He wrote the first web browser and the first web page, making it possible for information to be stored and accessed from different places.

In 1991, he officially launched the World Wide Web, also known as the WWW. This allowed people to create and visit websites, making information available to anyone with a computer and an internet connection.

Challenges and Hard Work

At first, not everyone understood how important the World Wide Web would be. Some people thought it was too complicated, and others were not sure if it would be useful. But Tim believed in his idea and worked hard to improve it. Instead of keeping the web for himself, Tim decided to make it free so that anyone could use it. He wanted people from all over the world to share knowledge and ideas.

A Lasting Impact

Today, Tim Berners-Lee's invention has changed the world. People use the web for learning, entertainment, business, and communication. Without it, we wouldn't have social media, online shopping, or video streaming!

Tim continues to work on making the internet safe and open for everyone. He has won many awards for his work, and in 2004, Queen Elizabeth II knighted him for his contributions to technology.

Thanks to Tim Berners-Lee, we live in a world where information is just a click away. Every time you visit a website, send an email, or search for something online, you are using the World Wide Web—the amazing invention he created!
