

Name _____

The Inventor's New Robot

In a bustling city, there lived a clever inventor named Jasper. Jasper loved creating gadgets and was known as the best builder in town. One day, he decided to make a new robot that could be a helper for everyone.

Jasper started by sketching the design on paper. He used a ruler to make sure all the lines were straight. Next, he began building the robot, using a welder to join the metal parts together. After many hours of hard work, the robot began to take shape.

The robot had a shiny silver exterior and was equipped with powerful motors. Jasper installed a computer inside the robot to act as its brain. This computer was a super thinker, capable of solving problems quickly.

When the robot was finally complete, Jasper named it Helper. Helper could do many tasks, like cleaning the floor with a vacuum and serving dinner to guests. People in the city were amazed at how Helper made their lives easier.

One day, a gardener asked Jasper if Helper could assist with planting flowers. Jasper programmed Helper to dig holes, plant seeds, and water the flowers. The garden became more beautiful than ever before, thanks to Helper's assistance.

As the sun set, Jasper felt proud of his creation. He knew that Helper would be a great helper for the entire city. Jasper looked forward to inventing even more amazing things in the future.
