Space Explorers

Welcome aboard our spaceship, little space explorers! Today, we're zooming through the galaxy to discover new planets and meet friendly aliens. Our first stop is the planet Neptune, where we encounter a fascinating creature called the "Neptunian."

With its shimmering scales and long tentacles, the Neptunian waves to us from its spaceship. "Neptunian" has the long u sound. Can you say "Neptunian"? Excellent! Next, we journey to the planet Jupiter, where we spot a group of fluffy creatures known as "Jupituffs." These cuddly aliens love to float in the clouds. "Jupituffs" also has the long u sound. Can you say "Jupituffs"? Well done!

Now, let's travel to the distant planet Uranus, where we meet a playful alien named "Uranut." Uranut is a curious creature with big, round eyes and a bouncy tail. "Uranut" has the long u sound in it too. Can you say "Uranut"? Amazing!

As we continue our cosmic journey, we encounter a group of musical aliens called the "Saturn Singers." These aliens love to sing and dance under the rings of Saturn. "Saturn" has the long u sound. Can you say "Saturn"? Great job! Today, we've met fascinating creatures like the Neptunian, Jupituffs, Uranut, and Saturn Singers, all with the long u sound.
