T O C R T F Q K C B Y N Z Q K R H T W R
X C Y R N Z I L Z O H E J D J G S D I K
X O A A W L R S H R H M Z I D Q Q L D U

- Parallelogram - A shape with two pairs of equal-length sides running parallel to each other.
- Quadrilateral - A closed shape formed by connecting four straight edges.
- Asymptote - A line that a graph gets infinitely closer to but never touches.
- Hypotenuse - The side opposite the largest angle in a right-angled triangle.
- Polynomial - An expression consisting of terms with variables raised to non-negative powers combined with constants.
- Trigonometry - The study of relationships between angles and side lengths in triangles.
- Logarithm - The inverse operation to exponentiation, determining the power needed to reach a given value.
- Calculus - A branch of mathematics focusing on change and accumulation.
- Permutation - An arrangement of a set of items where the order is significant.
- Factorial - The product of all positive integers up to a specified number.
