- A lightweight, brittle metal used in aerospace and electronics due to its stiffness and thermal stability.
- A shiny, silvery element essential for biological systems and commonly used in lightweight alloys.
- A reactive metal vital for skeletal systems and a key component in cement and lime production.
- A soft, silvery metal often used in fireworks and as a component in phosphorescent materials.
- A dense, reactive metal used in drilling fluids and diagnostic imaging for the gastrointestinal tract.
- A highly radioactive metal historically used in luminous paints and now primarily studied for its properties.
- A mineral and rock consisting of a double carbonate of calcium and magnesium, widely used as a building material.
- A substance derived from heating limestone, used in construction, agriculture, and industrial processes.
- A group of silicate minerals containing varying amounts of calcium, sodium, and potassium, important in ceramics and glassmaking.
- A soft sulfate mineral used in plaster, wallboard, and as a soil conditioner.
