Chisel - A handheld tool used for shaping or removing material from a solid surface.

Marble - A durable, fine-grained stone favored for its aesthetic appeal and sculptural versatility.

Bronze - A metal alloy commonly used for creating intricate and long-lasting works.

Clay - A malleable material ideal for forming detailed shapes and preliminary models.

Mold - A hollow form used to replicate designs by pouring or pressing material into it.

Casting - A technique where liquid material is poured into a form and allowed to harden into a specific shape.

Carving - A subtractive process involving the removal of material to reveal a desired form.

Relief - A sculptural style where figures are raised above or recessed into a flat background.

Statue - A three-dimensional representation of a figure or subject, often lifelike in form.

Armature - An internal framework providing support and structure for a piece during creation.
