A component made of glass or plastic that directs and concentrates light onto the recording medium.

An adjustable opening that controls the amount of light entering the camera.

The duration and intensity of light allowed to reach the recording medium during a shot.

A mechanical or electronic device that opens and closes to regulate light entry for capturing an image.

A three-legged stand used to stabilize the camera for sharper images and consistent framing.

The sharpness or clarity of the subject in an image, achieved by adjusting the optics.

The boundaries of the visible area in a photograph, determining the composition.

The arrangement or quality of illumination used to enhance the subject or mood of an image.

A reversed tone or color image used to produce positive prints in traditional photography.

The visible texture or pattern resulting from the size of light-sensitive particles in film photography.
