J N Q X W T Z G A B U N S X G R B L V A

- A strong, versatile metal that forms the backbone of construction materials and is essential for biological oxygen transport.
- A reddish-brown metal with excellent conductivity, widely used in electrical wiring and plumbing.
- A lustrous metal known for its high thermal and electrical conductivity, often used in jewelry and industrial applications.
- A dense, malleable metal prized for its rarity and resistance to corrosion, commonly used in finance and electronics.
- A silvery-white metal resistant to corrosion, commonly used in alloys and rechargeable batteries.
- A dense, precious metal resistant to tarnish, used in catalytic converters and fine jewelry.
- A hard, magnetic metal critical for creating high-strength alloys and rechargeable battery technologies.
- A shiny, corrosion-resistant metal often used in plating and the production of stainless steel.
- A lightweight, strong metal highly resistant to corrosion, essential in aerospace and medical implants.
- A bluish-white metal used for galvanizing steel to prevent rust and as an essential trace element in living organisms.
