Shadow - A dark shape made when something blocks light, helping to find the sun's position.

Spring - The season between winter and summer when temperatures and rainfall start to change.

Winter - The coldest season of the year, affecting weather and atmospheric behavior.

Forecast - A prediction of future weather based on weather data.

Overcast - A sky covered with many clouds, reducing sunlight and possibly bringing rain.

Temperature - A measure of how hot or cold the air is, important for understanding the weather.

Sunshine - Direct sunlight, affecting temperature and weather patterns.

Clouds - Collections of water in the sky, important for predicting rain and weather changes.

Snow - Frozen water falling from the sky, affecting temperatures and indicating weather changes.

Rain - Liquid water falling from the sky, important for daily weather and forecasts.
