The Scavenger Hunt at the Science School

In the bustling town of Scranton, there was a special place called the Science School. The Science School was known for its exciting experiments and fascinating field trips. One day, the school decided to host a scavenger hunt to celebrate Science Week. Students were thrilled about the scavenger hunt, especially friends Sophie, Scott, and Sam.

On the morning of the scavenger hunt, the principal, Mrs. Scott, gathered everyone in the schoolyard. She explained the rules and handed out a list of scientific items they needed to find. The list included a sample of soil, a sketch of a butterfly, a small telescope, a seashell, and a science book. The students had to search the school grounds and the nearby park to find these items.

Sophie, Scott, and Sam formed a team and immediately started their search. They decided to go to the school garden first. Sophie used a small shovel to scoop up a sample of soil, while Scott sketched a butterfly that landed on a flower. Sam found a seashell near the sandbox, left behind from a previous beach-themed project.

Next, they headed to the science lab to look for a small telescope. They searched the shelves and finally spotted one on a high shelf. Scott climbed on a stool to carefully retrieve it. Their last stop was the library to find a science book. The librarian, Mrs. Sanchez, showed them a shelf filled with science books, and Sam picked out a book about space exploration.

With all the items checked off their list, Sophie, Scott, and Sam raced back to the schoolyard. They were the first team to complete the scavenger hunt. Mrs. Scott congratulated them and awarded them with special science badges. The students cheered, and the friends felt proud of their teamwork.

The scavenger hunt was a huge success, and everyone agreed it was the best Science Week activity ever. Sophie, Scott, and Sam couldn't wait to participate in more fun and educational activities at the Science School.
