

Name _____

Where Does an Aardvark Live?

Short Answer Key

1. The main food of an aardvark is termites and ants.
2. Sandy soil is important because it makes it easier for aardvarks to dig their burrows.
3. Aardvarks' burrows provide shelter for other animals, like snakes and small mammals.
4. Aardvarks don't live in deserts or rainforests because these areas don't have enough termites and ants.
5. Aardvarks are most active at night.
