

Name _____

How Does an Aardvark Reproduce?

Short Answer Key

1. Aardvarks find a mate by using sounds and scents.
2. An aardvark cub is hairless, blind, and completely dependent on its mother.
3. The mother nurses and protects the cub inside the burrow.
4. The cub stays with its mother for up to six months.
5. It is important because it helps maintain a healthy population and balance in the ecosystem.
