## All About Monkeys

### Short Answer Key

1. A primate is a type of animal that includes monkeys, apes, and humans.
2. Living in a troop helps monkeys protect themselves and share food.
3. Monkeys spread seeds by eating fruit and dropping seeds, which helps new plants grow.
4. Prehensile tails help monkeys grip branches and swing from trees.
5. Protecting monkey habitats ensures they have a safe place to live and helps the environment.
