

Name _____

How Does an Alpaca Move?

Short Answer Key

1. Alpacas have padded feet that help them grip the ground without slipping.
2. The pacing gait helps alpacas stay balanced on uneven ground.
3. Alpacas run to escape danger.
4. Alpacas can run up to 35 miles per hour for short distances.
5. Alpacas may stomp their feet to warn the herd of threats.
