## Amphibian Diversity: Exploring the Many Species of Frogs, Toads, and Salamanders

### Short Answer Key

1. Frogs have smooth, moist skin and long hind legs.
2. Salamanders have long bodies and tails and can regenerate lost limbs.
3. Caecilians are typically found burrowing underground.
4. Amphibians play roles as both predators and prey and help control insect populations.
5. One adaptation that helps amphibians survive in diverse habitats is their ability to breathe through their skin.
