

Name _____

What Makes Angelfish So Special?

Short Answer Key

1. Freshwater angelfish live in rivers like the Amazon and are usually smaller, while saltwater angelfish live in coral reefs and are often larger and more colorful.
2. Freshwater angelfish are usually silver with black stripes or marbled patterns, while saltwater angelfish are bright yellow, blue, orange, or a mix of these colors.
3. Freshwater angelfish typically grow up to 6 inches long and 8 inches tall.
4. Angelfish are territorial to protect their food and space, especially in coral reefs where resources can be limited.
5. Angelfish have excellent eyesight, which helps them spot predators and food from a distance.
