

Name _____

Where Do Angelfish Call Home?

Short Answer Key

1. Freshwater angelfish are commonly found in the rivers and streams of South America, especially the Amazon River Basin.
2. Coral reefs provide saltwater angelfish with food, protection from predators, and places to raise their young.
3. Freshwater angelfish need plants and gentle currents to stay safe from predators.
4. Saltwater angelfish eat algae and tiny sea creatures found in coral reefs.
5. Two threats to angelfish habitats are pollution and habitat destruction.
