

Name _____

Where Do Angelfish Call Home?

Open-Ended Response Answer Key

1. Angelfish need specific water types because their bodies are adapted to certain conditions, like the softness of the water or its saltiness.
2. If habitats are destroyed, angelfish could lose their homes, food sources, and safe places to raise their young, which might lead to fewer angelfish in the world.
3. People can help protect angelfish habitats by reducing pollution, supporting conservation efforts, and protecting rivers and coral reefs.
4. A scientist studying angelfish habitats might look for clean water, healthy plants or coral, and the right temperature to ensure the environment is suitable for angelfish to thrive.
