

Name _____

What's on the Menu for Angelfish?

Short Answer Key

1. Being omnivores means angelfish eat both plants and animals.
2. Freshwater angelfish eat algae and tiny insects.
3. Saltwater angelfish use their pointed noses to poke into coral cracks to find sponges or other food.
4. Protecting angelfish habitats ensures they have enough food and a safe place to live.
5. Freshwater angelfish eat insects and algae, while saltwater angelfish eat sponges and small sea creatures.
