

Name _____

Amazing Angelfish: Nature's Graceful Swimmers

Short Answer Key

1. Freshwater angelfish live in rivers like the Amazon, while saltwater angelfish live in coral reefs.
2. Angelfish use body movements and patterns to communicate, especially about food or territory.
3. They eat algae, small insects, and tiny aquatic creatures like brine shrimp.
4. Conservation efforts are important to protect angelfish from threats like pollution and overfishing.
5. Saltwater angelfish are more colorful because they live in coral reefs, which help them blend in and survive.
