## Where Do Ants Live?

### Short Answer Key

1. Ants build nests in forests and deserts (other correct answers: urban areas, grasslands, or underground).
2. Ants in rainforests use trees by building nests high up in the branches or hiding under leaves.
3. Leafcutter ants use the fungus they grow as a source of food.
4. Ants in urban areas build nests near garbage because it provides easy access to food scraps.
5. Underground nests protect ants from predators and extreme weather conditions.
