

Name _____

What Is an Ant's Life Cycle Like?

Short Answer Key

1. Ant larvae look like small, wiggly worms and have no legs.
2. Worker ants feed the larvae and protect them by keeping the nest safe and clean.
3. Inside the cocoon, the larva transforms into an adult ant, developing legs, antennae, and other features.
4. Adult ants can be workers, soldiers, or queens.
5. The queen ant is important because she lays eggs to grow the colony.
