

Name _____

How Does an Armadillo Reproduce?

Short Answer Key

1. Male armadillos find a mate by following the female's scent.
2. Nine-banded armadillos can delay pregnancy by waiting before the fertilized egg attaches to the uterus.
3. A baby armadillo's shell is soft at birth but hardens as it grows older.
4. Pups stay with their mother for a few months before leaving on their own.
5. After nursing, baby armadillos eat insects and other small foods.
