

Name _____

How Does an Armadillo Move?

Open-Ended Response Answer Key

1. Armadillos' ability to run, dig, and swim helps them escape predators and find food.
2. If an armadillo couldn't dig burrows, it would be more vulnerable to predators and extreme weather.
3. As an armadillo, I would dig burrows for shelter, run to escape danger, and swim to cross rivers safely.
4. The ability to swim allows armadillos to cross rivers and search for food in wet environments.
