

Name _____

What Does a Barracuda Eat?

Short Answer Key

1. It means that barracudas eat meat, not plants.
2. Barracudas' speed helps them surprise their prey and catch them quickly.
3. Barracudas use their sharp teeth to grab and tear apart their prey.
4. Barracudas also eat squid and crustaceans like shrimp and crabs.
5. By eating smaller fish, barracudas help control fish populations and keep the ocean balanced.
