

Name _____

What's on the Menu for Bass?

Short Answer Key

1. Bass eat insects and zooplankton when they are small.
2. Bass use their sharp eyesight to spot prey, even in murky water.
3. Ambush hunting is when a predator hides and waits for prey to come close before quickly attacking.
4. Largemouth bass eat frogs, smaller fish, birds, mice, and crayfish.
5. Bass are important because they help control populations of smaller fish and insects, keeping the ecosystem balanced.
