

Name _____

The Dangers Bass Face in the Wild

Short Answer Key

1. Natural predators of bass include ospreys and bigger fish like pike.
2. Climate change can harm bass by making the water too warm or too cold for them to survive.
3. Humans can hurt bass populations by polluting the water and overfishing.
4. Parasites that harm bass include leeches and worms.
5. Bass use their sharp senses to spot predators and find safe places to live.
