

Name _____

Do Bears Form Relationships with Other Species?

Short Answer Key

1. A symbiotic relationship is when two species interact in ways that affect each other.
2. Bears spread seeds through their droppings, helping plants grow in new areas.
3. Ravens follow bears to eat leftover food from their hunts.
4. Ticks and fleas feeding on a bear's blood.
5. Bears mix nutrients into the soil while digging, which helps plants grow.
