## Do Bears Form Relationships with Other Species?

### Open-Ended Response Answer Key

1. Spreading seeds helps plants grow in new areas, which supports the entire ecosystem.
2. A bear's presence can affect species by controlling animal populations and helping plants grow.
3. (Example response) I would follow the bear and eat leftovers after it catches food.
4. Removing bears could disrupt the food chain and reduce plant growth, harming the entire ecosystem.
