

Name _____

What Does the Insect Bee Look Like?

Open-Ended Response Answer Key

1. Bees have stripes in different colors to warn predators and to blend into their surroundings, which helps them survive.
2. Bees' fuzzy hairs and pollen baskets help them collect and carry pollen back to their hive.
3. Without wings, bees would not be able to fly to flowers, making it hard for them to collect nectar and pollen.
4. As a bee, I would use my antennae to smell flowers, my legs to carry pollen, and my wings to fly from flower to flower. My fuzzy body would help me gather pollen.
