

Name _____

A Day in the Life of a Bee

Short Answer Key

1. Being diurnal means that bees are active during the day and rest at night.
2. Worker bees gather food and protect the hive, among other jobs.
3. The waggle dance helps honeybees share information about the location of flowers with nectar and pollen.
4. Bees help plants grow by pollinating them when they collect nectar and pollen.
5. Solitary bees live alone and don't rely on a colony, unlike honeybees.
