

Name _____

All About Bees

Short Answer Key

1. Bees collect nectar and pollen from flowers. Nectar is used to make honey, and pollen helps plants produce seeds.
2. Bees move pollen from one flower to another, which helps plants produce seeds.
3. The three main types of bees in a colony are the queen, worker bees, and drones.
4. Worker bees collect nectar, guard the hive, and take care of baby bees.
5. People can help bees by planting more flowers, reducing pesticide use, and protecting natural habitats.
