

Name _____

Bees: Nature's Tiny Heroes

Short Answer Key

1. When bees carry pollen from one flower to another, they help plants reproduce by making seeds, fruits, or vegetables.
2. Bees help grow foods like apples, almonds, and blueberries.
3. Bees are important in the food chain because they support animals that eat fruits, seeds, and nuts from the plants they pollinate.
4. Bees face challenges like habitat loss, pesticides, and climate change.
5. Bees keep ecosystems balanced by supporting plant growth and attracting animals, which helps biodiversity.
