

Name _____

Bees: Nature's Tiny Heroes

Open-Ended Response Answer Key

1. Pollination is important because it helps plants reproduce and grow, which provides food for animals and people and keeps ecosystems healthy.
2. Without bees, many plants would struggle to grow, leading to less food for animals and humans. This could harm entire ecosystems.
3. People can help protect bees by planting wildflowers, reducing pesticide use, and creating safe spaces like bee hotels or gardens.
4. Bees are important to the planet because their daily activities, like pollination, support plants, animals, and humans, making them a key part of a healthy environment.
