

Name _____

Beetles in Danger: Predators and Threats

Short Answer Key

1. Frogs, birds, lizards, shrews, ants, and spiders eat beetles.
2. Deforestation destroys beetles' habitats, making it harder for them to find food and shelter.
3. Beetles face dangers like habitat destruction and climate change.
4. Parasites harm beetles by feeding on their bodies and weakening them.
5. A beetle can defend itself by using a hard shell, spraying a smelly liquid, or showing bright colors.
