

Name _____

The Life Cycle of a Betta Fish

Short Answer Key

1. The male Betta fish guards the bubble nest and protects the fry until they can swim on their own.
2. Fry eat nutrients from their yolk sacs during the first few days after hatching.
3. Juvenile Betta fish are smaller, less colorful, and have shorter fins than adult Betta fish.
4. Betta fish become fully grown around 3 to 4 months old.
5. Understanding the life cycle helps pet owners care for Betta fish properly at each stage of growth.
