

Name _____

Frogs Big and Small - Open-Ended Sample Answer Key

1. Different sizes help frogs survive in different habitats. Bigger frogs can catch larger prey, while tiny frogs can hide easily from predators.
2. Since frogs absorb water through their skin, pollution can make them sick, which can harm frog populations.
3. They are very tiny and live in hard-to-see places, like under leaves, which makes them easy to miss.
4. People could stop hunting them, protect their habitats, and reduce pollution in rivers where they live.
