## A Dive into India's Biodiversity

### Short Answer Key

1. The banyan tree is significant in India due to its widespread canopy created by aerial roots that grow down from its branches, providing shade and shelter. It is unique for its ability to cover a vast area with a single tree.
2. The Indian elephant is revered in Indian culture as a symbol of wisdom and strength. It is found in national parks and forests across India and plays a vital role in maintaining the ecosystem by dispersing seeds and shaping the landscape.
3. The snow leopard is primarily found in the high Himalayan regions of India. It is known for its elusiveness, as it inhabits remote and rugged terrain, making sightings rare.
4. Tea and coffee plantations in India are vital to the country's agriculture and economy. They generate significant revenue through exports and provide employment opportunities in the regions where they are cultivated.
5. One wildlife conservation project in India is "Project Tiger," which focuses on the conservation and protection of tiger populations and their habitats.
