## The Fantastic Voyage: Exploring the Lymphatic System and the Blood Vascular System

### Multiple Choice Questions

1. What is the primary role of the circulatory system?
  - a) Collecting waste products
  - b) Transporting oxygen and nutrients
  - c) Defending against invaders
  - d) Draining excess fluids
  
2. How does the lymphatic system move its fluid?
  - a) It relies on the heart's pumping action.
  - b) It uses muscle contractions when you move.
  - c) It doesn't move fluid; it stays still.
  - d) It uses tiny pumps located in the lymph nodes.
  
3. Which system helps to reduce swelling and maintain fluid balance in the body?
  - a) Circulatory system
  - b) Digestive system
  - c) Lymphatic system
  - d) Skeletal system
  
4. What are the small structures in the lymphatic system that scan for harmful invaders?
  - a) Capillaries
  - b) Lymphocytes
  - c) Arteries
  - d) Veins
  
5. What is the main difference between blood and lymph?
  - a) Blood is red, and lymph is green.
  - b) Blood carries oxygen, and lymph carries carbon dioxide.
  - c) Blood contains more proteins than lymph.
  - d) Blood flows through arteries, and lymph flows through veins.
