

Name _____

Blooms of the Seasons

Short Answer Key

1. Annual plants complete their life cycle within one year.
2. Perennials contribute to garden landscapes by returning year after year, adding a sense of permanence.
3. Biennials establish themselves in the soil during their first year, then bloom, set seed, and complete their life cycle in their second year.
4. Perennials often die back in winter and return in spring.
5. Annuals ensure the survival of their species by setting seed before fading away.
