## The Magical Way Your Body Eliminates Waste: The Urinary System Explained

### Short Answer Key

1. Nephrons in the kidneys filter waste products and excess substances from the blood.
2. The bladder stores urine temporarily until it's eliminated from the body.
3. The ureters transport urine from the kidneys to the bladder, helping with waste elimination.
4. Urine travels from the kidneys through the ureters to the bladder, where it's temporarily stored before being eliminated through the urethra.
5. The final step in waste elimination is when urine is released from the body through the urethra.
