

Name _____

What Does a Bumblebee Look Like?

Open-Ended Response Answer Key

1. The bumblebee's fuzzy body collects pollen, and its proboscis helps it drink nectar. Its wings and strong legs allow it to carry heavy loads back to the nest.
2. Bright colors warn predators not to attack them because they can sting. This helps keep the bumblebee safe while it works.
3. If I could watch a bumblebee, I would look at its fuzzy body, wings, and how it collects nectar with its proboscis because these are unique features that help it survive.
4. Bumblebees' fuzzy bodies, long tongues, and fast-flapping wings make them excellent pollinators. They can carry pollen and nectar easily, helping plants grow.
