## How Bumblebees Buzz and Move

### Short Answer Key

1. Bumblebees create buzzing sounds by moving their wings up to 200 times per second.
2. Bumblebees' strong wings and muscles allow them to carry heavy loads while flying.
3. Hovering helps bumblebees reach deep inside flowers to collect nectar.
4. Bumblebees use their legs to grip flowers and collect pollen with tiny hairs on their legs.
5. Bumblebee movement helps pollinate plants, which supports the growth of fruits, vegetables, and flowers.
