## What Does a Camel Eat?

### Open-Ended Response Answer Key

1. Camels have thick lips, tough mouths, and long necks to help them eat tough plants.
2. Storing fat helps camels survive when food is hard to find.
3. If camels lived in a forest, they might eat more leafy plants and fruits instead of dry grasses.
4. Camels can survive longer without food or water due to their fat storage and water-conserving abilities.
