

Name _____

The Life Cycle of a Camel

Short Answer Key

1. A camel's life begins when a mother camel gives birth to a calf.
2. Camel calves drink their mother's milk for nourishment.
3. Camels have humps that store fat, allowing them to survive without food for long periods.
4. Camels become more independent during the juvenile stage.
5. Adult camels can carry heavy loads and transport goods across the desert.
