## All About Camels

### Short Answer Key

1. A dromedary camel has one hump, while a Bactrian camel has two humps.
2. Camels help by carrying goods and people, providing milk, meat, and wool.
3. Camels have humps for energy storage, wide feet, long eyelashes, and can drink a lot of water at once.
4. Their bodies hold water very efficiently and they can drink large amounts when needed.
5. Camels have thick lips that protect them from being hurt by prickly plants.
