## The Future of Driving: Can You Buy an Autonomous Vehicle?

### Multiple Choice Questions

1. How do autonomous vehicles work?
  - a) They use advanced sensors and artificial intelligence.
  - b) They rely on magic to drive themselves.
  - c) They have human drivers who control them.
  - d) They don't use any technology; they are regular cars.
  
2. Why are companies testing autonomous vehicles?
  - a) To make transportation more efficient.
  - b) To increase traffic congestion.
  - c) To reduce road safety.
  - d) To make parking spaces more expensive.
  
3. Are autonomous vehicles readily available for personal use right now?
  - a) Yes, they are widely available.
  - b) No, they are primarily used for research and testing.
  - c) Yes, but they are very cheap.
  - d) No, they are only available in rural areas.
  
4. What is one challenge that autonomous vehicles need to overcome?
  - a) Making driving decisions.
  - b) Flying in the air.
  - c) Never needing maintenance.
  - d) Avoiding accidents.
  
5. How might autonomous vehicles save consumers money in the long run?
  - a) By increasing insurance costs.
  - b) By reducing the need for car ownership and accidents.
  - c) By making gas prices higher.
  - d) By requiring expensive maintenance.
