

Name _____

Canada's Geography and Natural Features

Short Answer Key

1. Banff and Jasper National Parks are two national parks in the Rocky Mountains.
2. A polar bear or Arctic fox lives in the tundra.
3. The Great Lakes are important for wildlife because they provide water, fish, and a habitat for many birds and animals.
4. The boreal forest has many trees and animals, while the tundra has few trees and is much colder.
5. Canada's geography includes mountains, lakes, forests, and tundra, making it a great place for hiking, fishing, skiing, and other outdoor activities.
