

Name _____

Daily Habits of Catfish

Short Answer Key

1. "Nocturnal" means that catfish are most active at night.
2. Catfish tend to live alone because they are not social animals and do not rely on others for survival.
3. During the breeding season, male and female catfish work together to guard their eggs and protect them from predators.
4. Catfish use their barbels to sense their surroundings and detect food in the dark.
5. Catfish might gather in areas with plenty of food, like spots rich in plants, insects, or small fish.
